WORK EXPERIENCE

JAN 2025 - JUN 2025

Logistics Procurement Intern

- Coordinated across Quality, Legal, Business, and Procurement teams to keep three concurrent procurement projects audit ready and compliant, owning contract administration and milestone tracking throughout
- Ran structured RFQ processes across 3 separate tenders, spanning Vietnam-China, Indonesia, and New Zealand, evaluating 5 pricing configurations per tender for shortlisted suppliers in each market
- Negotiated a warehousing rate ~40% below competing offers by benchmarking and evaluating supplier proposals through Excel-based cost simulations

JUN 2023 - AUG 2023

Operations Management

- Coordinated vendor relationships and conducted market research for a growth initiative
- Improved stock visibility and supported inventory turnover by reorganizing warehouse layout and re-sorting inventory alongside a 4-person team

MAR 2020 - DEC 2021

Resource Management Assistant

- Onboarded ~8 personnel per cycle plus 1-2 ad hoc onboardings monthly by managing onboarding logistics, stakeholder communications, and budgets across recurring operations
- Delivered a full office visual redesign, including 11 acrylic posters and 2 lift-door stickers, under a \$1,000 budget within 2 months, by sourcing and managing vendor production from brief through installation, alongside regular duties

PROJECT EXPERIENCE

WORKPLACE VISUAL DESIGN – SOURCING TO INSTALLATION

BRIEF & SCOPING

1

Notice Boards

Infographic & Frames

Lift Design

Received requirement to refresh office-level design; scoped it through discussions across different department heads

SUPPLIER SOURCING & COORDINATION

2

Identified and engaged suppliers, managed quotes and specifications within procurement constraints

DESIGN COORDINATION & PRODUCTION

3

Worked with suppliers on layout and design specs, reviewing and approving production drafts

INSTALLATION & HANDOVER

4

Coordinated on-site installation, verified quality and placement, signed off within budget and timeline

*Actual photos unavailable due to camp security restrictions

PROJECT EXPERIENCE

HOVERCRAFT DESIGN - HORIZONTAL THRUST TEAM

Project Teams & Timeline

Hovercraft Final Product

Main Objective:

To build a remote-controlled Hovercraft capable of carrying a 300g payload

Horizontal Thrust Objective:

- Able to travel at a max speed of 1m/s
- Able to manouver around obstacles

My Role

As the Team Lead (Horizontal Thrust Subsystem), I owned the subsystem's design, component selection, and testing, while ensuring the team kept to shared budget, timeline, weight, and power constraints across the project.

Responsibilities

- Designed and tested the horizontal thrust components against speed and obstacle-avoidance targets
- Selected and sourced components to build thrusters
- Set internal milestones aligned to the other teams' dependencies
- Flagged tradeoffs early and kept communication open with other team leads to prevent downstream blockers

Main Objective:

Assess On's competitive position against Hoka and Adidas, and develop a Singapore market-entry strategy for a defined consumer segment.

Brand Analysis

Market Strategy

My Role

Independently owned every stage of the project from inception through completion - competitive analysis, target segment definition, and go-to-market strategy

Responsibilities

- Conducted a brand audit of On against Hoka and Adidas
- Defined and justified a target consumer segment
- Built the go-to-market strategy - storytelling, sustainability messaging, run-club activations
- Structured the analysis independently, with no brief to follow

PROJECT EXPERIENCE

System Map Layout

LIVABLE CITIES: REIMAGINING QUEENSTOWN'S ACCESSIBILITY

Main Objective:

Identify a liveability issue in Queenstown and propose design interventions to address it.

My Role

As the Team Lead, I owned the project's overall direction by translating an open-ended brief into a structured workplan, delegating research and design workstreams across the team, and designing all final visual deliverables.

Sample of Project Brochure Design

Responsibilities

- Identified issue to be elderly accessibility & walkability across institutional and residential nodes
- Delegated workstreams and timelines across a 6-person team
- Shaped the problem statement and "Healthy Healthcare Hub" vision from group research
- Proposed accessibility-focused design interventions for elderly residents
- Designed all visual deliverables: Systems map, stakeholder analysis, concept boards of solutions, brochures.

Sample of Project Solutions Design

PROJECT EXPERIENCE

FACILITY LAYOUT OPTIMIZATION – SINGAPORE SAFETY DRIVING CENTRE

Main Objective:

Diagnose service-flow and space-utilization inefficiencies at a live, public-facing facility and propose an optimized layout and staffing plan.

My Role

Working in a 3-person team, I led the on-site data collection and quantitative analysis: conducting site visits, mapping problem areas, and building the REL Chart and From-To Chart that supported our recommendations.

Responsibilities

- Conducted site visits to observe facility operations and identify problem areas
- Built REL Chart & From-To Chart to map activity relationships and flow across the facility
- Collected and analyzed operational data to support the diagnosis
- Calculated the optimal number of counter staff and equipment units (photo booths, eye-testing machines, food stalls) needed to meet demand
- Proposed both short-term and long-term solutions covering layout and equipment changes

LEVEL 1 CAR PARK

Sample of project solution

Relationship Chart

Activity & Space Relationship Diagram

PROJECT EXPERIENCE

PATIENT JOURNEY SIMULATION – NATIONAL DENTAL CENTRE SINGAPORE

Main Objective:

Model the Oral & Maxillofacial Surgery patient journey at NDCS using discrete-event simulation, and recommend an optimal resource configuration to reduce appointment waiting time.

My Role

Co-led a 6-person team - liaised directly with NDCS stakeholders to ground the model in real clinic operations, and built the FlexSim simulation used to test proposed solutions.

Responsibilities

- Co-led a 6-person team, liaising with NDCS stakeholders to align the model with real clinic operations
- Built and validated the FlexSim discrete-event simulation of the O&M Surgery patient journey against real clinic data
- Simulated different combinations of doctors and dental chairs to test their effect on appointment waiting time
- Ran a 15-scenario sensitivity analysis across staffing and chair configurations to identify the configuration with the lowest waiting time
- Presented the recommended optimal resource mix directly to NDCS supervisors

PROJECT EXPERIENCE

MARITIME DISRUPTION ANALYTICS — FINAL-YEAR DISSERTATION

Main Objective:

Quantify how the Red Sea crisis in 2024 reshaped Singapore port congestion and shipping lead times, using large-scale vessel-tracking data.

My Role

Sole owner of the project end to end: conceived, scoped, and executed independently, with no established methodology.

Responsibilities

- Processed 1TB of raw AIS vessel-tracking data in Python
- Designed and built the entire analysis pipeline independently - data cleaning, a pre/during/post analytical framework, and lead-time quantification

Key Findings:

- Identified that Singapore prioritizes berth allocation for larger vessels during congestion periods
- Recommended a 10-15% buffer space allocation for the upcoming Tuas Mega Port, based on the 9-12% throughput achieved by Keppel Terminal's temporary reactivation during the congestion period
- Proposed a multi-indicator congestion trigger mechanism for emergency terminal activation, based on Berth Utilization Rate and Berth-on-Arrival (wait time before a ship is allocated a berth)

PROJECT EXPERIENCE

SONDER — LIMINALITY: A SELF-DIRECTED FRAGRANCE HOUSE

Main Objective:

Design and build a complete fragrance brand and digital product from concept and campaign direction to a live, interactive website as proof of end-to-end creative and technical ownership.

My Role

Sole owner of the project end to end: conceived the brand concept, art-directed the collection, wrote all brand copy, and built the site myself.

50ml Fragrance Bottles

Main Site Page

Scent Quiz

Responsibilities

- Conceived and art-directed SONDER, a genderless fragrance house and its Liminality collection: Wander, Alter, Emergence and Beyond.
- Wrote all brand and product copy
- Designed and built the live, interactive site (Three.js/WebGL) with 3D bottle visuals and an integrated, GA4-tracked "Find Yours" scent quiz
- Produced supporting deliverables: styled case study and PM-style delivery plan

SKILLS & TOOLS

What I have worked with

Supplier and pricing analysis @ Philips, including stakeholder-ready charts and graphs. Also used for optimization and linear programming coursework at NUS.

Used to design presentations, brochures, and visual deliverables across school and work, including this portfolio, the Queenstown systems map and concept boards, and the MINDEF workplace visuals.

Currently building hands-on familiarity to support structured project tracking and timeline management

Built and validated a FlexSim discrete-event simulation of the NDCS patient journey, co-leading a 6-person team.

Used Python to process 1TB of AIS vessel-tracking data for my dissertation, building the analysis pipeline independently.

Certification:

- Scrum Product Owner Certification September 2026 (In Progress)
